

## product description

The 6063 extruded aluminum alloy plaster frame may be used in conjunction with most products. It can be surface-mounted or flush-mounted depending upon the application. It allows for easy removal of grille, register or diffuser when extractors or balancing dampers may require adjustment.

**model PF**

## product description

This model is 6063 extruded aluminum alloy. We utilize a 1/4" blade to provide uniform distribution of air across the face of the diffuser or grille. This unit may be mounted directly on the grille itself or it may be duct-mounted by specifying a model EG-DM. All blades are individually adjustable and mounted into nylon bushings where the blades meet the frame.

**model EG**

## product description

This model is a 26-gauge galvanized steel square-to-round adapter that is field-installed to allow the use of flexible or metal duct. It can be mounted on any product and in all cases the round dimension must be 2" smaller than the square dimension with the exception of the AVP product line which allows for the round dimension to be identical to the square dimension, i.e., 12" square neck with 12" round connection. In all other instances a 10" round connection would be the largest available for a 12" x 12" neck dimension. A 3" collar is provided.

**model SR**

## product description

The Model DFR is a duct-mounted combination air straightener and equalizing grid. All blades are individually adjustable. Available in square and rectangular configurations. All-aluminum construction.
