product description

Diffuser and damper are of 6063 extruded aluminum construction. The core is fully removable for simple duct construction. The damper is operable from the face of the unit. The duct connection size is 6" smaller than the tile or face size in all cases. As an example, a nominal 6 x 6 unit is suited for a 12 x 12 tile opening. Test data show on TD-15 - 22.

This model is painted either aluminum or white in color.

| | |
|------------------|--|
| AVP-SP | Square units only with legs on two opposite sides that interconnect with ceiling tiles. |
| AVP-SPS | Rectangular units only with legs on two opposite <i>short</i> sides that interconnect with ceiling tiles. |
| AVP-SPL | Rectangular units only with legs on two opposite <i>long</i> sides that interconnect with ceiling tiles. |
| AVP-SP-DM | Square or Rectangular units with locking tabs on two opposite sides. No legs are provided. Suitable for existing ceiling systems. |

Various accessories may be added to this product line by adding the suffix "OB" if an opposed blade damper is required, add the suffix "EG" if an equalizing grid is required or the suffix "SR" if a round neck adapter is required.
