DESCRIPTION:

1. The Model RAFB blades are airfoil in design and can be mounted only in the fixed 38° setting and are spaced 3/4" on center.
2. This model is assembled in a two-part system: one is the mounting frame that serves as a retainer for the filter, the other is the core that provides easy access to the filter.
3. The mounting frame, the core frame and the blades are 6063 extruded aluminum alloy with 200-R1 satin anodized finish, and the frames have a wall thickness of .050". The core is separated from the blades by the use of an extruded rigid PVC track that becomes an integral part of the frame. This method of assembly eliminates corrosion and vibration.
4. An optional opposed blade damper is attached to the return grille with positive-locking spring clips. It has the same aluminum construction and is screwdriver-operated through the face of the unit.
5. Available in clear anodized, white or a variety of custom colors.
